For Release on
June 20, 2008

PHOENIX, AZ.— Progressive Concrete Works, Inc., a leader in the architectural concrete and paving industry, is pleased to announce that they have been awarded the accomplishment of being the “**First and Only**” company in the United States to be a certified installer of Pervious Concrete. In accordance with ACI spec 522 revision 2008. Pervious concrete is a durable concrete with a “no fines” mix design. This paving material is recognized by the U.S. EPA & LEED for its positive impact with water-pollution control, storm water management, recharging our ground water aquifers, reducing the negative impact of urban heat islands and reducing the need for conventional retention basins, thereby allowing for a more effective land use. The system basically serves two functions; 1) as a paved surface for driving, parking or walking and 2) it forms a dry detention pond that allows the passage of water through it’s voids to store rainwater during a storm event.

Progressive Concrete’s Drainscape™ pervious concrete, has been installed in numerous areas all around Arizona; with recent jobs including the ASU Fine Arts Parking Lot in Tempe, Reid Park Zoo in Tucson and the **Glendale Park & Ride**, which is one of the largest Pervious Concrete projects in the Western United States. To date, Progressive Concrete Works, Inc. has installed more than 200,000 sf of Pervious Pavement throughout Arizona.

The team at Progressive Concrete Works, Inc. has one thing in mind, to provide Arizona with a more eco friendly future through sustainability in concrete.
